

# Failing a Newborn Hearing Screening: What's Next?

Courtney Bartz Harrell DNP, CRNA • The University of Texas at Austin School of Nursing

#### The Problem:

- Implementation of the Universal Newborn Hearing Screenings has facilitated earlier identification, referral to services and diagnosis of hearing loss (Centers for Disease Control and Prevention, 2016)
- In 2014, 42% of infants in the U.S. and 55% in Texas had no documented diagnostic hearing care (CDC, 2016b, 2016c)
- Timely intervention decisions after hearing loss diagnosis for children who are deaf or hard of hearing (DHH) to early intervention programs can significantly advance language acquisition and speech development (Russ, Hanna, DesGeorges & Foresman, 2010: Sorkin & Zwolan, 2008; Yoshinaga-Itano, Sedey, Coulter, & Mehl, 1998: Yoshinaga-Itano, Sedey, Wiggin, & Chung, 2017)

# **Objectives:**

- Evaluate the perceptions of families whose children are DHH regarding audiological follow-up after a failed newborn hearing screening
- Evaluate the perceptions of various types of hearing care providers regarding audiological follow-up after a failed newborn hearing screening
- Develop a strategic support system based upon the unique characteristics identified by both providers and families of children who are DHH that enhances audiological services after failed newborn hearing screening

# **Project Design:**

- Exploratory, qualitative study utilizing Framework Analysis (FA)
- Purposeful sample (n=14)
  - Hearing Care Providers (n=5)
  - · Parents of children who are DHH (n=9)
    - ASL (n=3), hearing aid (n=3), Cochlear Implant (n=3)

### **Evaluation:**

#### **SECONDARY PRIMARY** CHANGE **DRIVERS** DRIVERS CONCEPTS Understanding EHDI Guidelines - Families Understanding EHDI Guidelines - Providers Standards Identify the Method/manner of sharing information strategic program Hearing Care Importance of hearing care that enhances the Options attainment of ormal hearing los diagnosis after **Hearing Care** failed newborn Difficulty accessing care Coordination as identified Accessibility Multiple meetings/specialties hrough the sem structured The Manner or interviews of families and Timing of Overwhelmed (emotion and information) providers of sharing children with information hearing loss

# **Opportunities:**

- Reach populations with history of poor access to care (indigent, immigrant, rural)
- Facilitates earlier access to the hearing care community
- Identified participant challenges can guide hearing care providers with more purposeful, targeted, and unbiased education for the families of children who are DHH
- Transdisciplinary hearing care teams can utilize the identified challenges to care to set a standard of excellence for the development of a parent tool to guide and empower families through the diagnostic hearing journey

#### Conclusion:

- Four themes emerged from the FA:
  - . Knowledge or understanding of EHDI standards
  - · Hearing care options
  - Accessibility
  - Support
- Participants identified three target areas to address for enhanced care of children who are DHH:
  - Coordination of support services
  - · Transdisciplinary hearing care coordination
  - The manner and timing of sharing hearing loss information after failed screenings
